Model CMS ---

Size: 38" x 25" x 34"

Service Stand is designed and finished for use in the dining room. It has a #14 gauge polished stainless steel top, with a 3/8" high rim on front and ends and a 4" high splash on the rear.

Built in the top is a Model C-110-SK-3 Cory Electronic Push-Button Controlled Automatic Coffee Brewer with water tank. Output ten (10) gallon of coffee per hour. Furnished complete with two (2) twelve (12) cup glass decanters.

Adjacent to this are two (2) built in electric Cory decanter warmers for immediate supply of coffee and hot water for tea. Adjoining this and built in the fixture, is a self-leveling lowerator with a capacity of six (6) dozen saucers and a self-leveling lowerator complete with twelve (12) trays with a capacity of twelve (12) dozen cups.

Base of the fixture is constructed of #20 gauge stainless steel, with a #4 polished finish. Lower portion of the fixture is open and fitted with a bottom and intermediate stainless steel shelf 10" deep, for storage of condiments and extra china. It is fitted with 4" high adjustable stainless steel legs.

Rear of fixture is normally open to set against the wall, but can be furnished with screwed on back panel for other locations.

This fixture requires an electric connection for 110/220 volts, 3 wire, one phase. There is one (1) 6 K. W. electric connection and one (1) 1/4" water connection. Connections required to be made BY OTHERS.

Model CMF---

Top construction of the Model CMF is identical to the Model CMS, with all equipment furnished, except that the body is constructed of wood cored FORMICA: the exterior FORMICA facia can be selected as to color.

Due to the additional thickness of the body in this construction, the intermediate stainless shelf is eliminated and the unit is furnished with a bottom shelf only. The front is fitted with a pair of Formica sliding doors, finished the same as the body.

Either Model described above is designed to meet the National Sanitation Foundation Standards.
